THE BEAUTY ALLEY

User Manual

Pilot edition · administrator, concierge, stylist, guest

The salon's booking, front-desk and floor system. One website serves two audiences: a public booking site for guests, and a staff console behind a sign-in. Same address, different doors.

	Address
Public site	`https://beautyalleyibms.vercel.app`
Staff console	`https://beautyalleyibms.vercel.app/login`, then `/app`

There is no "sign up". Accounts are created by the administrator; a guest books without one.

1. Who sees what

Role	Can open	The job
Administrator	Everything	Runs the business: prices, treatments, team, promos, client records, reports
Concierge	Overview, Bookings, Promos, Scan arrivals, Tasks, Board	Runs the desk: takes bookings, receives guests, assigns work
Employee	Overview, Bookings (own chair), Check-in, My tasks, Attendance	Works the floor: their appointments, the door, their own clock
Client	My bookings	Sees their own appointments and passes

If a screen is missing from the sidebar, that role does not have it — the API would refuse anyway. Nothing is hidden that could be opened by guessing a link.

2. Signing in

1. Go to `/login`, enter email and password.
2. You land on the page for your role.
3. **Wrong password** — the form says so and keeps your email; retype it.
4. **Locked** — five wrong attempts lock the account briefly; the message tells you how many minutes. Wait it out rather than trying again.
5. **Disabled** — the account was switched off by the owner. Retrying will never work; ask for it to be re-enabled.

Sign out from the account menu in the console header. Closing the tab does not sign you out on a shared counter machine — sign out properly.

3. A guest books online

1. Open the site → **Services** to browse, or **Book** to start.
2. Pick one treatment. (One per booking: the length of the appointment is the length of that treatment.)
3. Pick a day, then a time. Only times the salon can actually serve are offered.

4. Enter name and phone. An account is optional; if you are signed in, the booking is attached to your record instead.
5. Confirm. You get a **pass** — booking code, date and time, stylist, and a QR code.

Keep the pass link: it is the only way back to the booking without an account. Do not forward it — whoever holds the link can show it at the door.

4. The pass and arrival

The pass is the guest's ticket. At the salon:

- **Guest shows the QR** → the desk scans it in **Scan arrivals**. The guest and their booking appear, and the desk presses **Confirm arrival**. Scanning alone changes nothing, deliberately: the desk gets to look first.
- **A pass can be used once.** A second scan is refused as already used.
- **The stylist** can also record arrival from **Check-in**, on their own chair.

If a guest lost the link, the desk finds the booking in **Bookings** and can reissue or check in from there.

5. The desk — a day at the counter

Before opening

1. **Overview** — today's count, arrivals due, anything unassigned.
2. **Bookings** — read the run sheet for the day; note who is in and when.
3. **Tasks** — anything left from yesterday that is still open.

Taking a booking at the counter (`Bookings → New booking`)

1. **Treatment** — search the menu, pick one.
2. **When** — day and time. The day's availability is shown as a whole.
3. **Who** — search the client book by name, phone or email; for someone new, just take a name and phone.
4. **Stylist** — the list only offers stylists who perform that treatment and are free at that time. If it is empty, that time genuinely has nobody: change the time, not the stylist.
5. Add a promo code if the guest has one — the discount shows before you confirm.
6. Notes are for the floor: allergies, preferences, "running late".
7. Confirm → the pass appears. **Print it** and hand it over. No payment is taken at this point.

Receiving a guest — `Scan arrivals`, scan or paste the token, confirm. **Assigning work** — `Tasks`: write the task, choose the assignee, save. It shows up on their phone immediately; there is only one copy of a task. **Proposing a promo** — `Promos → propose`. It is inert until the administrator approves it; the row tells you which state it is in. **The board** — `Board` is the owner's report, readable by the desk: revenue, completion, no-shows, the week's curve, top treatments.

6. The floor — a stylist's day

1. **Overview** — your day at a glance.
2. **Bookings** — your chair only. The system scopes it; you cannot see, and cannot accidentally edit, a colleague's bookings.
3. **Check-in** — when your guest arrives, record it here.
4. **My tasks** — the work the desk assigned. Move it to in progress, then done, and say what happened. The desk sees the same status.

5. **Attendance** — time in when you start, time out when you finish. Hours are calculated from those two stamps; nothing is filled in for you.

7. The administrator

Treatments (`Services`) — the menu is data, not code. Adding or repricing a treatment changes the public site, the booking page and availability at once. **Retire, don't delete**: a retired treatment leaves the booking menu but stays on the bookings that sold it.

Team (`Team`) — add a person, give them a role and the treatments they perform. Two things make a stylist bookable: they must perform the treatment, and they must have **working hours**. A new stylist with no rota will not appear in the booking picker — set their week, and they appear immediately.

Promos (`Promos`) — proposals from the desk arrive as pending. Approve to make a code live, or reject with a reason. Retiring a code stops new redemptions and keeps the history.

Clients (`Clients`) — bookings, lifetime value and last visit per client, exportable to CSV with identical numbers. Deactivating is a soft delete: the history stays, the client leaves the active list.

Board (`Board`) — the monitoring view. Tiles are draggable and the layout is remembered on your device. Every number is read live from the database.

8. When something looks wrong

What you see	What it means	Do this
"You do not have access"	That screen is not part of your role	Use your own screens; ask the owner if you think it should be
A stylist is missing from the booking list	Not qualified for that treatment, no working hours, or already booked at that time	Check Team: treatments + rota, then check the time
"Nobody is free at that time"	Genuinely no qualified stylist free	Change the time or the day; do not force it
Pass refused at the door	Already used, or the token was altered	Look the guest up in Bookings and check them in from there
Login says locked	Five wrong attempts	Wait the stated minutes
A record you created is not there	Note the name, time and page, and report it immediately	This should never happen; it is treated as an incident
Page loads but everything is empty	The API is down, not the data	Check `/health`; if it is not 200, report it

9. House rules

1. **Never run database setup scripts against the live system.** Seeding, restoring and demo resets are destructive and refuse to run in production — if one ever asks to proceed, stop and ask.
2. **One treatment per booking.** Two treatments need two bookings; the system cannot yet check a combined length against a stylist's shift.
3. **A pass is a ticket.** Treat the link like a key: send it to the guest only.
4. **Retire, don't delete** — treatments, promos and clients all keep their history this way.
5. **Report, don't retry.** If a write fails, say what you did; repeating it can create a duplicate.
